TO: Whom it may concern

In 2007 Shadybrook Farms decided to move their crop insurance coverage to Harry Daisey, an agent who represents ARMtech Insurance. Mr. Daisey/Daisey Insurance, Inc. provided a free GPS mapping service, which we feel greatly benefits our operation. There service provided us with maps showing the exact acres we farm. This has the potential to lower the acres we insure, increase our yields and speed claims payment. We also have the convenience of having maps available to direct chemical and fertilizer applicators to a certain part of our farm when we were too busy to go and show them.

The service we have received from Daisey Insurance, Inc. and ARMtech is far superior to any experience with crop insurance that we have had in the past. Recently we had a wet spring and were prevented from planting Green Peas. When we went to report no acres, Harry pointed out we had a prevented planting claim. His office was very helpful in supplying rainfall amounts and other weather related info that was needed for our claim. As a result we received a claim check for that crop.

We would highly recommend Daisey Insurance, Inc. to any farmer who is looking for great service from the agent and the company. Feel free to call me at the numbers above if you have any questions.

Sincerely,

Bill Graham
